Stream Manager

SMART ONVIF PROXY

Identity system for a smarter camera stream layer.

BRAND GUIDELINES • ASSET SPECIFICATIONS • GITHUB & HOME ASSISTANT

01 / FOUNDATION

Multiple feeds. One clean layer.

A visual system built around the purpose of the product, not the host platform.

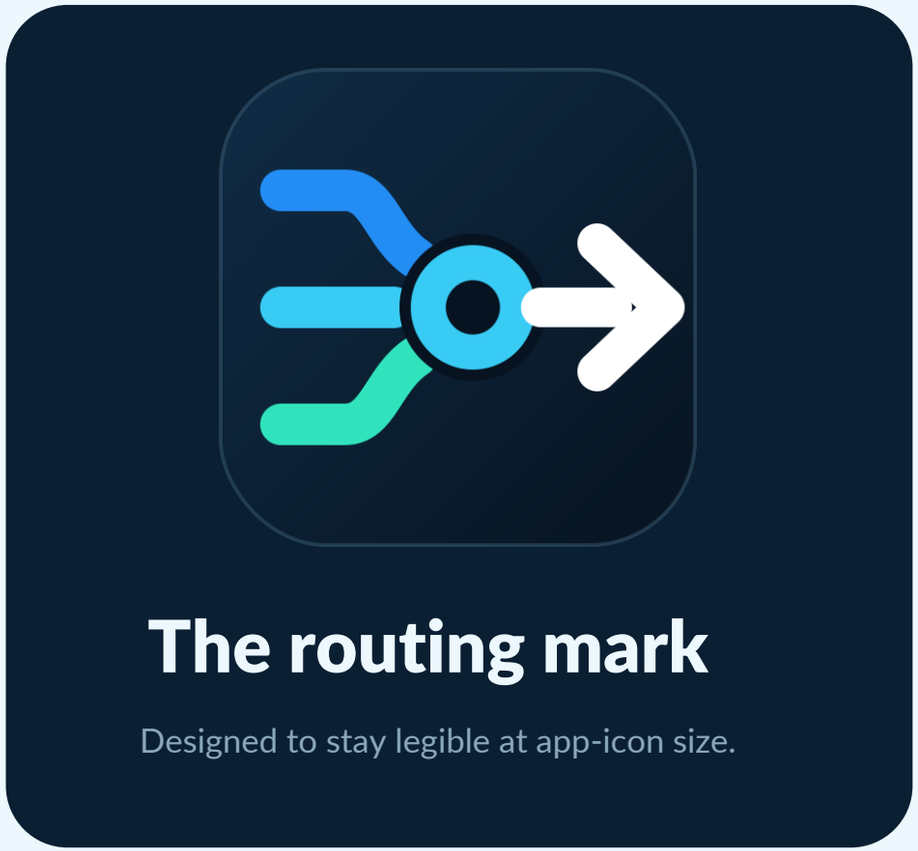

THE IDEA

Route. Consolidate. Deliver.

Three converging stream lines signify camera sources. The bright center represents the intelligent proxy. One clear output arrow shows delivery to a downstream consumer.

ONVIF

VIDEO ROUTING

The routing mark

Designed to stay legible at app-icon size.

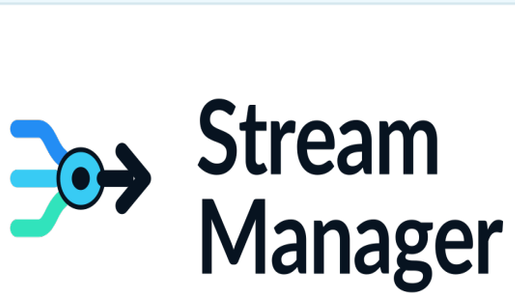

02 / LOGO SYSTEM

Built for both interfaces.

Use the full wordmark for headers. Use the routed mark on tiles, avatars and compact UI.

PRIMARY / DARK SURFACES

INVERSE / LIGHT SURFACES

App symbol

Use at 128 px or larger whenever possible.

Bare mark

For light interface elements where a tile is unnecessary.

03 / COLORS

Signal, not noise.

Dark foundations frame vivid accents. The accent colors represent distinct, coherent data paths.

01

INK

#071320

02

DEEP TIDE

#102C46

03

SIGNAL BLUE

#238DF4

04

CYAN

#38CBF4

05

RELAY MINT

#31E3BC

06

VAPOR

#ECF8FD

RECOMMENDED BALANCE

Use navy and ink for large backgrounds, cyan for calls to action, blue for data inputs and teal for confirmed routing or healthy stream status. Do not rely on color alone to encode stream health.

04 / TYPOGRAPHY

A utility-first voice.

Short, functional and precise. Stream Manager should read like dependable infrastructure.

PRIMARY TYPEFACE

Lato

Aa Bb Cc 0123456789

Bold headlines. Plain-language body copy.

Inter or the operating-system sans-serif may be substituted in application code when a webfont is unavailable.

WRITING EXAMPLES

Camera connected

Stream ready

Proxy unavailable

USE

Clear status, direct action, specific errors and consistent technical terms.

05 / DISTRIBUTION

Ready for the add-on store.

Home Assistant documentation now uses “app” for what was previously called an add-on.

IMAGE DELIVERABLES

icon.png

128 x 128 px

logo.png

250 x 100 px

PLACEMENT

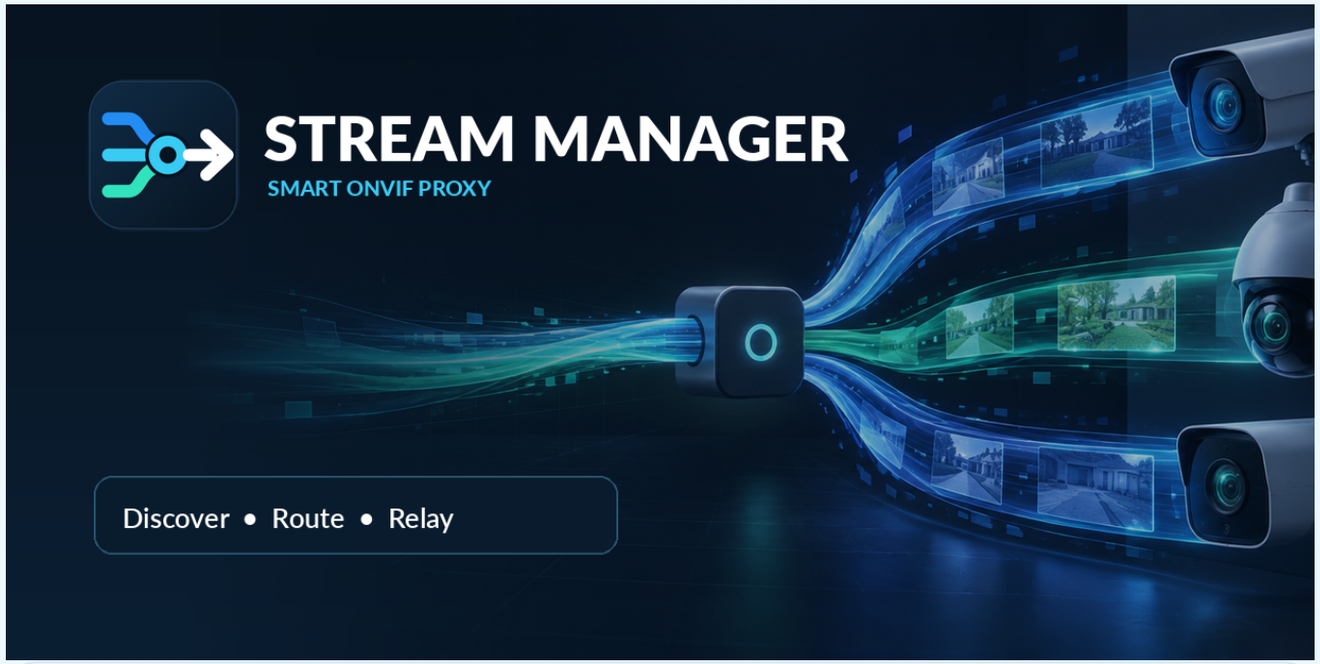

```
stream_manager/
  config.yaml
  icon.png
  logo.png
  Dockerfile
  README.md
  DOCS.md
```

Copy the two PNG files beside config.yaml.

06 / REPOSITORY

Recognizable at every link.

A strong preview thumbnail and a simple README banner establish consistency off-platform.

REPOSITORY SOCIAL PREVIEW

1280 x 640 px / under 1 MB

Upload in GitHub repository Settings.

README HERO

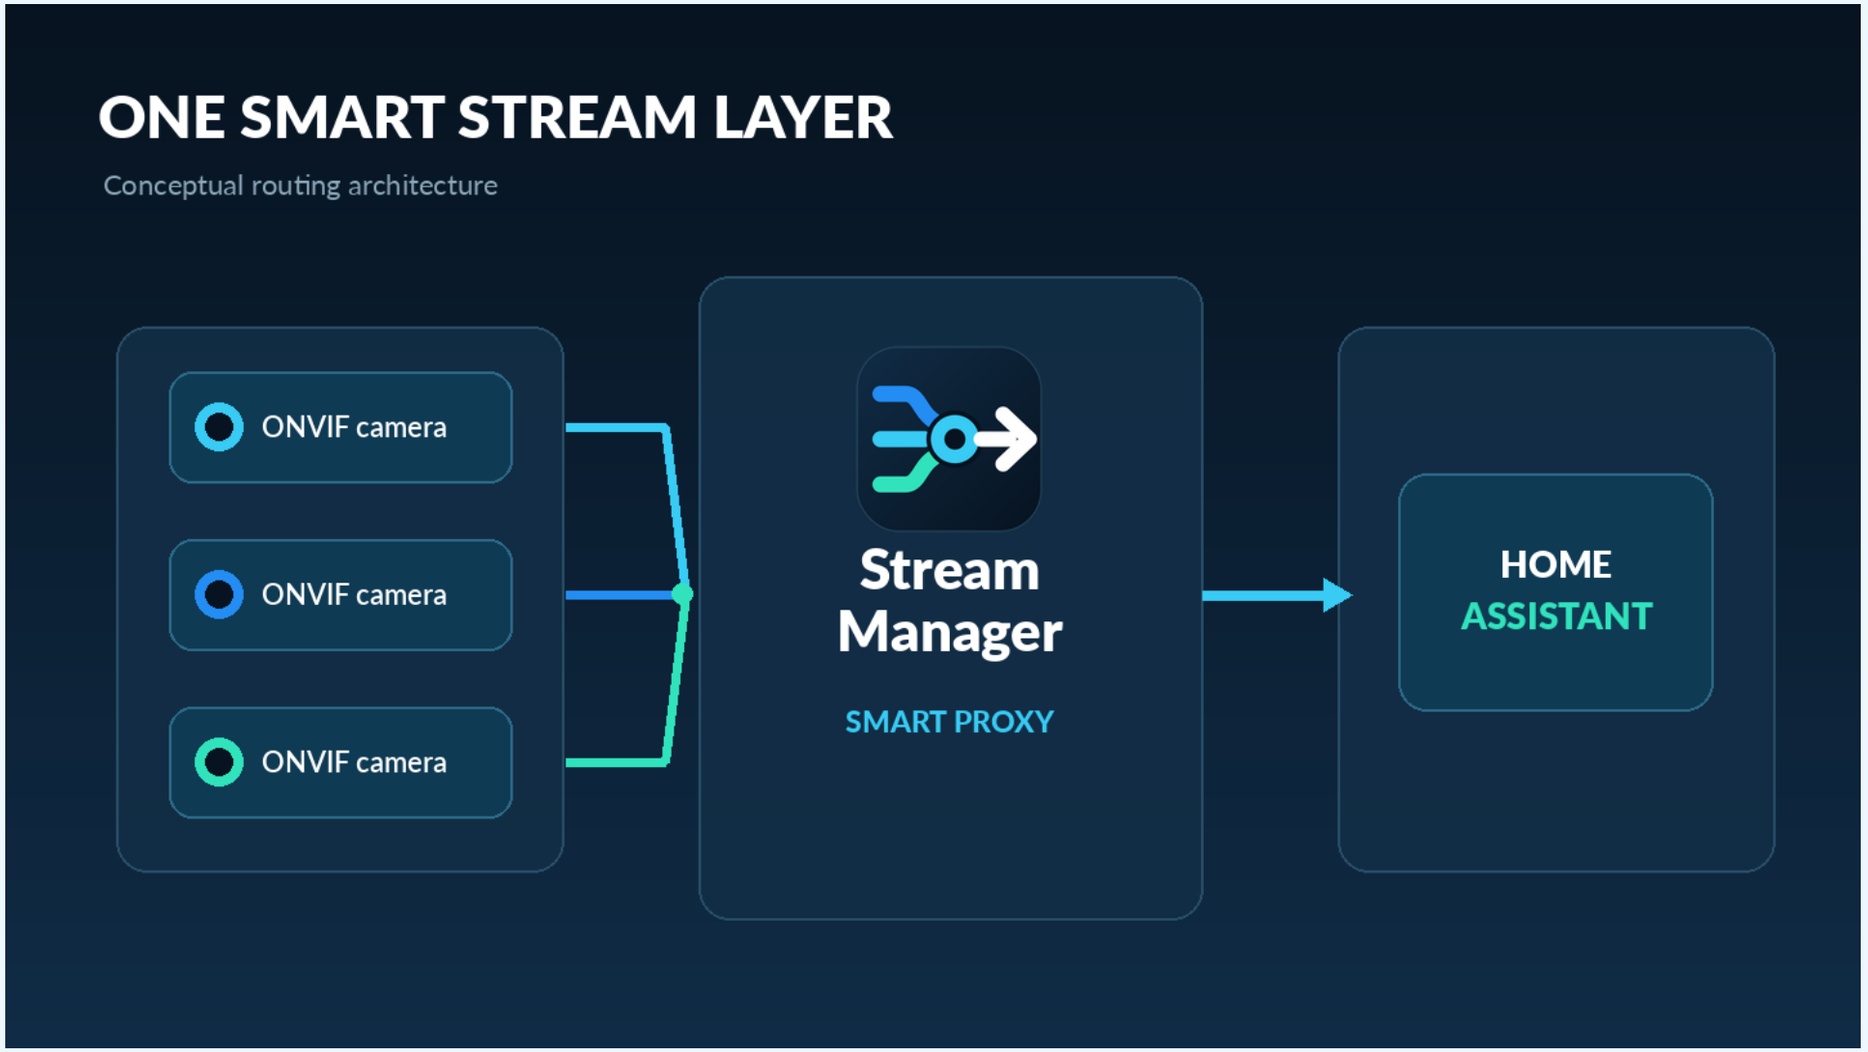

1600 x 600 px

Wide format for the project introduction, installation overview and documentation hub.

07 / DIAGRAMS

Explain the flow.

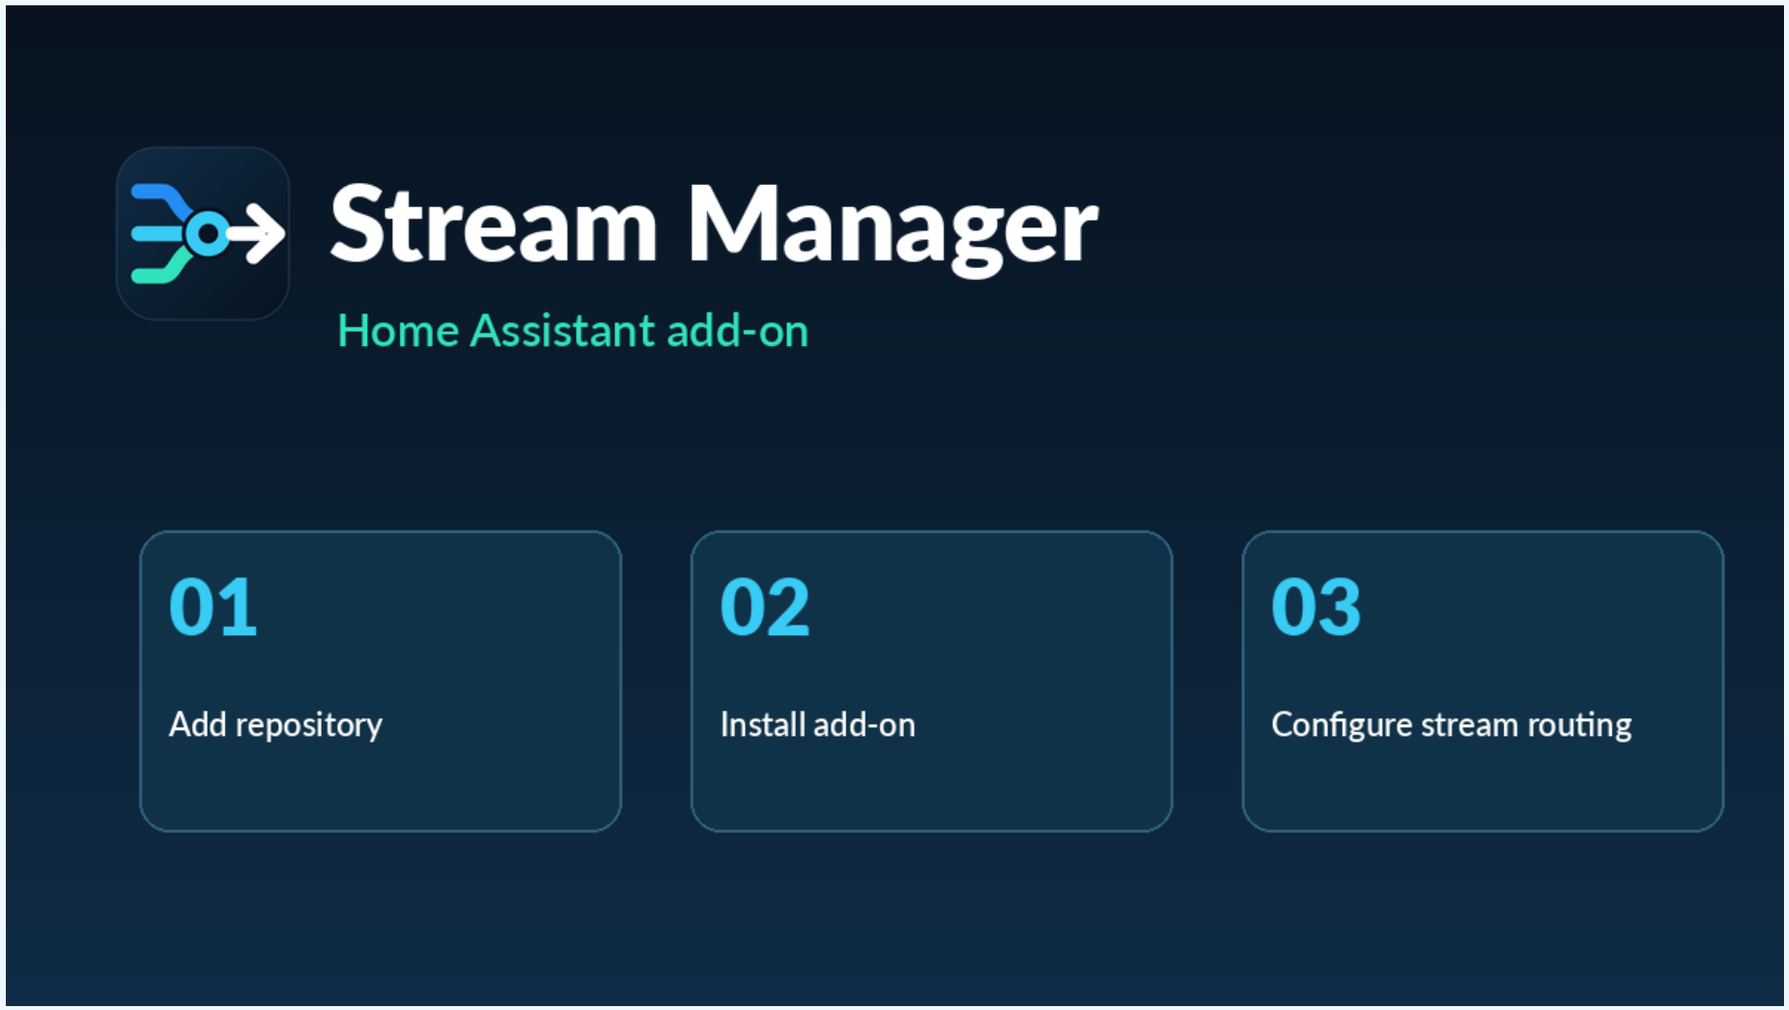

A conceptual architecture graphic for README sections, release notes and documentation.

08 / APPLICATIONS

Built for every touchpoint.

Repeat the identity without redrawing it: consistent assets for discovery, installs and release communication.

AVATAR

512 x 512

FAVICON

09 / USAGE RULES

Keep the symbol intact.

Consistency is more valuable than decoration. Preserve the intended visual hierarchy and spacing.

CORRECT USE

AVOID MODIFICATION

PRACTICAL GUARDRAILS

Maintain half a routing-node diameter of clear space around the mark. Never stretch, rotate, overlay another brand symbol, add strokes or swap individual route colors. Use the white wordmark on dark backgrounds and ink on light backgrounds.

10 / HANDOFF

Drop the files straight in.

The ZIP separates native Home Assistant app artwork from optional custom integration artwork.

DIRECTORY OVERVIEW

```
Stream_Manager_Brand_Kit/
  01_Logos/
    SVG/  PNG/
  02_Home_Assistant_Addon/
    icon.png  logo.png
  03_Optional_Integration_Brand/
    brand/
  04_GitHub/
  05_Design_Tokens/
  06_Documentation/
  07_Artwork/
```

FIRST 5 MINUTES

1. Add icon.png + logo.png
2. Add README banner
3. Upload GitHub social preview
4. Use tokens.json in UI

FILES ARE PORTABLE

SVG masters stay resolution-independent. PNG exports suit the store and GitHub. Tokens are available as CSS variables and JSON.

11 / IMPLEMENTATION NOTES

Independent by design.

Official requirements inform the export sizes, but the visual identity is original to Stream Manager.
